OF

QUALITY

NURSERY

STOCK

This list cancels all previous lists, and
is subject to change without notice

TERMS AND CONDITIONS OF SALE

ALL PRICES ARE NET, F.O.B. NURSERY AT NORTHBROOK, ILL., BOXING AND BALING EXTRA; NO CHARGE FOR PACKING BULK CARS.

All goods travel at the purchaser's risk and expense.

CAUTION—We accept all orders subject to crop conditions and on condition that same shall be void should injury befall our stock from hail, fire, frost, error in count or other causes beyond our control.

GUARANTEE OF GENUINENESS—If any nursery stock proves untrue to description or variety name under which it is sold, we hold ourselves in readiness, on proper proof, to replace such nursery stock that may prove untrue to description or name, or refund the original amount paid. **We shall in no case be liable for any sum greater than the amount originally received for said nursery stock.**

CLAIMS for any cause must be made promptly on receipt of stock. **We will not entertain claims after goods have been once accepted,** or when report is not made within **Ten Days** after arrival of stock. **We express or imply no warranty as to productiveness or life of the nursery stock we sell and will not be in any way responsible for the results secured in transplanting.**

SPECIAL NOTICE—Correspondents are requested to use their printed business letterheads. We do not quote prices to retail buyers. We use every effort to limit the distribution of trade prices to those whom we know to be entitled to receive them.

Summary of the 1911-1912 Season

The 1911-1912 season was a very successful one for the company. The total production was 100,000 tons, which is a record for the company. The quality of the production was also very high, and the company was able to sell all of the production at a profit. The company was also able to expand its operations during the season, and it is now a much larger company than it was at the beginning of the season.

General Instructions for the Survey

The first object of the survey is to determine the position of the station with respect to the coast. This is done by measuring the distance from the station to the coast and the angle between the line of sight and the coast. The second object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight.

The third object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight. The fourth object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight.

(continued)

The fifth object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight. The sixth object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight.

(continued)

The seventh object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight. The eighth object is to determine the position of the station with respect to the other stations. This is done by measuring the distance between the stations and the angle between the lines of sight.
